## Tracking Systems provides:

- Medicare/Medicaid validation for pick up/drop off locations

- Improved accountability

- Improved documentation

- Time card verification

- Competitive advantage for funding

- Driver/passenger protection

- Improved routing

- Improved vehicle maintenance

In New York State, there are more than 60,000 mentally and/or physically challenged individuals served by 55 agency affiliates of NYSARC. There are also countless private organizations dedicated to helping members achieve their optimal levels of independence through family support, recreational and vocational services, and other special programming. Safe, secure and efficient transportation — including moving individuals to and from work, events and appointments — is essential. It is also very costly, especially in light of reduced state and federal funding, and shrinking private support.
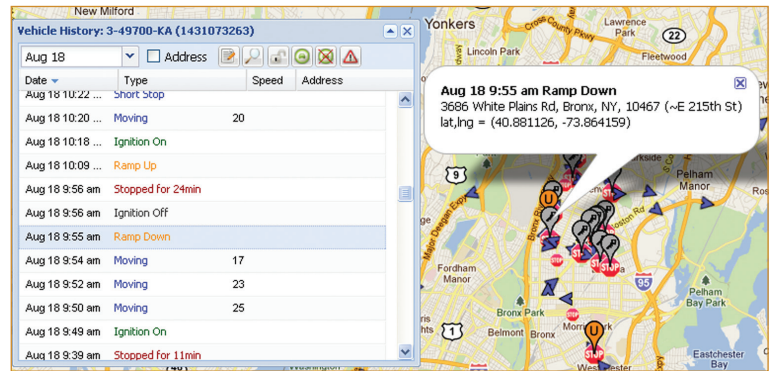

Tracking Systems is **your** answer to these challenges. Our full range of fleet services — combined with detailed mapping and reporting capabilities — has helped customers save thousands of dollars in maintenance costs while providing substantial fuel savings, identifying and eliminating wasted man hours and reducing insurance costs.

*This report can be for Medicare/Medicaid validation, and it can be exported to an Microsoft® Excel file for easy uploading to any accounting system*

## Why Tracking Systems?

· Flexible

· Customizable

· Easy to use

· No software purchase necessary

· Web-based and hosted

· Multiple hardware configuration

· Fleets separated by department

· Highly secure data center

· Local customer support

· Woman-owned enterprise

## *Features*

• Wheelchair lift sensors to monitor activity

• Services are available from any Internet connection

• Multiple workstations can be connected simultaneously

• Administrator has control over all access parameters and can identify each user with separate login and password

• Information to and from the server is encrypted and secure

• Vehicle route replay for up to 6 months

• Monitors oil changes, registration and maintenance schedules

• Hardware sensors for doors, seats and more

• Alerts from sensor triggers can be transmitted via cell phone and email, and are displayed on dispatch screen for immediate response

• All reports can be saved in Microsoft Excel for historical comparisons in PDF format or printed

• Landmarks can be placed at each medical facility and/or home care center

## *Benefits*

• Increased driver efficiency

• Improved routing

• Reduced maintenance costs

• Reduced fuel costs

• Reduced overtime costs

• Potential liability reduction

• Driver/passenger safety and security

• Enhanced employee accountability

• Trip Validation for Medicare/Medicaid reimbursement

• Peace of mind
